Safety Hazards Post and Copy:

The Risks Outweigh the Benefits.
What if THIS happens here?

Our Safety Matters.

Biofuel plant explosions are real.
What are the risks? Who will respond? What will the fallout be?

“The risks of this development far outweigh the benefits.

While we fully understand the need to create alternative energy sources, and for Semiahmoo First Nation (SFN) to pursue economically viable opportunities, there must be a way to do all this safely. Biofuel plant explosions are a very real risk. We have more questions than answers.

Why are Biofuel facilities exploding? What’s the impact if an explosion happens in our neighbourhood, by a sensitive ecosystem like our Little Campbell River, by Semiahmoo Bay? Who will respond to the emergency if the

explosion occurs on SFN land? What will the fallout and repercussions be for our families, environment, even our border crossing?

With this high risk of accident, combined with the health and environmental concerns, why would this be considered an ideal location for the Andion Biofuel plant?

To review the incidents of explosions that have already occurred, visit <https://nobiofuel.wixsite.com/learnmore/research>

The time to ACT is now. Groundbreaking for the facility is imminent.
